November 2015

A NEW CORPORATE IDENTITY FOR OASES

Commsoft has launched a new corporate identity designed to emphasise its flagship OASES (Open Aviation Strategic Engineering System) product. Created by, and for, engineers, OASES is one of the most successful aviation engineering and maintenance systems in the world combining ease of use with highly sophisticated functionality.

As part of a strategy to ensure a clear and consistent image across all media, a new logo has been designed to project a more modern feel whilst still retaining a link to the heritage of OASES. In addition, the identity has been carried through to a new-look website - optimised for SEO and for mobile platforms and better integrated with social media - as well as to a new LinkedIn page. There will also be a progressive updating of all OASES product and marketing literature.

Structured in a modular format to allow for scalability, OASES is continually being developed with the active participation of its more than 90 worldwide users, including national carriers, 3rd party maintainers, regional carriers, cargo specialists, charter operators and specialist rotatable stockists. Reflecting Commsoft's extensive capabilities in the key areas of data migration, training and interfacing to external systems, OASES can either be installed on a user's own hardware or accessed through the company's OASES Cloud service.

Nick Godwin, Commsoft Managing Director, commented: *"With the continued growth in the use of OASES, it was clearly important to create a new and consistent corporate identity that will work worldwide. We're delighted with the results and have every confidence that it will prove to be an essential asset in promoting OASES as a global best-in-class system."*
