OGMA OF PORTUGAL SIGNS WITH OASES

Commsoft, a world leader in aviation engineering and maintenance systems, is pleased to announce that OGMA, the Portuguese specialist aviation company, has signed a 4 concurrent users, 5-year contract to use OASES for its CAMO and engine support operations.

Commsoft's flagship product, OASES is a 'best-of-breed' MRO IT system which offers an industry-leading technical sophistication whilst being intuitively user-friendly. OGMA will be using OASES to support an international customer base, including third party airlines and corporate aviation fleets.

To allow for scalability, OASES is structured in a modular format and OGMA has selected the following modules: Core, Airworthiness, Planning and Line Maintenance Control. To operate OASES, OGMA will be taking advantage of Commsoft's newly-expanded hosting environment and the company has already planned for a prompt implementation.

Established in 1918, OGMA was 65% privatised in 2005 and is today a worldwide player in the aerospace MRO and manufacturing business, holding a wide range of approvals – Continuing Airworthiness Management Organisation (CAMO) EASA Part M Subpart G and Subpart I, Aircraft Maintenance Organisation (MOA) EASA Part 145 and FAA Part 145 and Design Organisation Approval EASA Part 21 Subpart J. The company is also an approved maintenance centre for several major manufacturers, including Embraer, Lockheed Martin and Rolls-Royce.

Nick Godwin, Commsoft Managing Director, commented: *"OGMA is a successful and growing business with an international reputation, so we were delighted by their decision to choose OASES as their favoured MRO IT system. It's a decision that also provides further justification for the investment we have made in providing customers with a Commsoft hosting option."*
